

AIR-TRAK

service on Nextel® phones from Sprint®

Track
employee
locations, times
and jobs — quickly,
easily and
accurately.

With Air-Trak running on Nextel GPS, Java-enabled phones from Sprint, your dispatchers and managers can easily locate, track, and message mobile employees in real time. You can access real time and historical information on employee locations, hours, and jobs to manage your mobile resources more effectively.

Powerful tools for administration and management

With its simple but sophisticated capabilities, Air-Trak gives managers unprecedented flexibility for monitoring and managing the mobile workforce. You can remotely and independently configure each phone for a variety of reporting options. You can set the frequency of position

data reporting or opt to send position reports only after a velocity threshold is exceeded, or a given number of heading changes, or a loitering period. Managers can also ensure that units are turned on and tracking with automatic launch, remote launch and persistent re-launch features.

Easy operation for mobile workers

It's easy to install Air-Trak software on your phones, and an intuitive on-screen menu makes your workers more productive right away. Workers can:

- Clock in and out.
- Record and automatically transmit job numbers and times.
- Manually transmit positions when needed.
- Access phone and GPS diagnostic information.

Air-Trak text messaging makes it quick and easy for workers to send updates, queries and responses. Your managers can customize the Air-Trak message lists to the unique needs of your business to make communication even more efficient.

With Air-Trak running on Nextel phones from Sprint, your business can:

> Locate and track mobile workers more consistently.

The Air-Trak software is automatically launched at phone power-up and can also be remotely launched. A persistent re-launch feature detects when users exit the application and re-launches it automatically.

> Manage time card and job task data easily.

Employee time card and job task start and stop times are easily captured, reported, and exported to Excel. An XML-based API facilitates data exchange with payroll, dispatching, and work-order management programs.

> Communicate more efficiently.

Mobile workers can receive dispatched messages and respond quickly with integrated text messaging that features custom message lists and auto-response choices.

> Track assets and workers more reliably.

In areas with no cellular coverage, GPS data and other information is stored and forwarded when coverage resumes.

Phones transmit location and other data through the Nextel guaranteed wireless network to the Air-Trak Data Center, which is accessed by your managers through an Internet-connected PC.

Nextel Compatible

Air-Trak® service on Nextel® Phones from Sprint®

Getting started

Air-Trak Java-based software is downloaded and installed wirelessly, with automatic activation. Air-Trak service can be initiated without a long-term contract, with low monthly subscription fees.

The Air-Trak system

Air-Trak service can be deployed on any combination of supported Nextel GPS, Java-enabled phones from Sprint, Nextel BlackBerry wireless handheld devices or Air-Trak in-vehicle platforms. With the addition of the Air-Trak SatCom Upgrade, phone and in-vehicle platforms can cost effectively provide 100% satellite coverage where cellular coverage is unavailable.

All Air-Trak systems are compatible with each other, easily upgraded, fully scalable (up to thousands of units), and conveniently monitored and managed through the Air-Trak Web Display or Enterprise Display application.

Specifications:

Requirements

- > Nextel GPS, Java-enabled phone from Sprint
- > Data access plan
- > Public IP address
- > PC with Internet connection

Supported Phones
